

Dear Sirs,

My husband and myself live at 996 East 200 South in Genola. We have become concerned over the proposal of Valley asphalt and others who would like to open plants near our home. We moved here from California about 5 years ago to escape just such things. It has been our experience that pollution and noise and danger on the roads is not worth any money Genola would get. My husband used to work for a large cement plant in California as a dispatcher and one of the reasons he changed jobs was because of the effect breathing the cement dust had on his health. We also have a grandson and granddaughter who are driving on Hiway 6 everyday and our graandson has already had an accident there so we fear for their saftey as well as others. This is a beautiful little valley and we would like it to stay that way. This does not mean we are against progress or growth but would like to see it in healthier an cleaner ways. Lets not just think of money but of our future and our childrens health . If we are going to think of money , then think of how our property values will go down and they will.

Sincerely,
Mr. & Mrs. Melvin Beachler
